## Key Language and Representations

**Word Problems** are the arithmetic number sentences written in a real-life reasoning and problem solving scenario.

**Number Lines** are used to count forwards e.g. 0, 4, 8, 12, 16, 20 and also to count backwards e.g. 30, 25, 20, 15, 10, 5.

**Concrete Objects** are manipulated or handled to calculate and represent a number sentence i.e. multilink cubes used for counting, sharing and halving

e.g.  $30 + 30 = 60$   +  = 

**Column Addition** is the formal written method of adding two or more numbers together, using a vertical arrangement in a columnar format, with regrouping.

$$\begin{array}{r} \underline{10\text{s}} \quad \underline{1\text{s}} \\ 2 \quad 0 \\ + 3 \quad 0 \\ 4 \quad 0 \\ \hline 9 \quad 0 \end{array}$$

$$\begin{array}{r} \underline{100\text{s}} \quad \underline{10\text{s}} \quad \underline{1\text{s}} \\ 200 \quad 70 \quad 4 \\ + 100 \quad 50 \quad 8 \\ \hline 400 \quad 30 \quad 2 \\ \hline 100 \quad 10 \end{array}$$

$$\begin{array}{r} \underline{100\text{s}} \quad \underline{10\text{s}} \quad \underline{1\text{s}} \\ 2 \quad 7 \quad 4 \\ 1 \quad 5 \quad 8 \\ + 4 \quad 3 \quad 2 \\ \hline 1 \quad 1 \end{array}$$

**Column Subtraction** is the formal written method of subtracting a smaller number from a bigger number, using a vertical arrangement in a columnar format, with regrouping.

$$\begin{array}{r} \underline{10\text{s}} \quad \underline{1\text{s}} \\ 1 \quad 5 \\ - \quad 4 \\ \hline 1 \quad 1 \end{array}$$

$$\begin{array}{r} \underline{100\text{s}} \quad \underline{10\text{s}} \quad \underline{1\text{s}} \\ 600 \quad 10 \\ 700 \quad 20 \quad 15 \\ - 200 \quad 40 \quad 6 \\ \hline 400 \quad 70 \quad 9 \end{array}$$

$$\begin{array}{r} \underline{100\text{s}} \quad \underline{10\text{s}} \quad \underline{1\text{s}} \\ 2 \quad 9 \\ 3 \quad 10 \quad 10 \\ - \quad 9 \quad 4 \\ \hline 2 \quad 0 \quad 6 \end{array}$$

**Strategy Applied** refers to when a formal written method is used to calculate a number sentence e.g.  $250 - 50 = 200$

Explained using appropriate mathematical language, proven using concrete objects that can be handled, shown with pictorial representations visualising the calculations, to ensure a greater understanding of a mathematical concept

**Part Whole Models** are pictorial mathematical images to represent **varied** calculations and number sentences.

e.g.  $60 + 30 = \underline{? 90}$

e.g.  $90 - 20 = \underline{? 70}$

**Bar Models** are an image, that pictorially represents a number sentence.

e.g.  $30 + 90 = \underline{? 120}$

e.g.  $200 - 20 = \underline{? 180}$

**Groups of objects** represents a total number of objects shared or divided into two or more groups of an equal number of the objects.

$$\frac{3}{4} \text{ of } 16 = \underline{12}$$
